

## Information about your implant

Date of insertion.....

- Your implant is called Jadelle
- It works **as a** contraceptive straight away
- The 2 contraceptive rods have been put in under the skin in the inner aspect of your .....arm.
- The gauze dressing can be taken off after 24 hours
- The plastic dressing can be taken off in 4-5 days time

## Checking the position of your implants

- After the plastic dressing comes off you should check that you can feel the 2 rods under the skin.
- If you are not able to feel them you will need to go to Family Planning or your GP to check the position.
- There maybe some bruising, swelling or tenderness at the insertion site which is normal, this should settle in a few days.

## What side effects might you have?

- After your plastic dressing comes off the small insertion scar should be healed over. If there is any redness or pain around the area, check this with your doctor.
- The commonest side effect is to have spotting bleeding in between your periods.
- This may improve with time but if it continues you may want to check this with Family Planning or your GP

## Removal of Jadelle

Jadelle provides contraception for up to 5 years but can be taken out at any time before this if you wish. You need to check if your GP does implant removal. If not, you will need to go to a Family Planning clinic to have this done . If your implant is not easy to feel under the skin Family Planning will organize a special scan to check the position which will help the removal process.
