

Referrals to the MAS Service

The criteria for triaging referrals to the MAS Service are as follows:

1. Symptomatic patient with abnormal USS that is cyst (endometrioma).
2. Symptomatic patient with infertility symptoms.
3. Patient with previous history of endometriosis.

Symptoms alone even with bowel symptoms don't correlate with patient finding and can be a generalist case, and we need to accept that a few patients will have 2 stage surgery.
